Guru requires an AI key to work — and you can get one for free.

BrilliantBull does not run the AI itself. You use your own free AI key, so your data stays between you and your AI provider and is never sent to or stored on our servers.

Privacy — Your questions go directly from you to the AI provider. We are not in between.

No Shared Limits — If everyone used one common AI key, users would share the same quota. With your own key, 100% of your AI quota is yours to use.

YOU CAN ADD MULTIPLE KEYS

Guru automatically uses a fallback system — if your first AI provider is busy or you reach its usage limit, Guru automatically switches to the next available provider.

That's why it's a smart idea to add 2 free AI keys (for example, Groq + Gemini) — so Guru keeps working without interruption.
